

This week we have focused on the creation of the Requester view. We have created lists and forms for Campaigns, Tasks and Items. The Campaigns can be saved, and this is not too much work to add for the Tasks and Items.

Much remains to be done on the Worker view.

Issues/problems encountered:

We came to the conclusion that some of the relations were reversed. This was due to the not-Chen-notation of the relations, as encountered last week.

Much time was spent trying to find how to redirect the user after login to a specific site view. We came to the conclusion that this is not documented in the video's, but instead only on a page that declares itself as deprecated, which was why we initially did not read it.
